

X Account Backtest

Review public investment views.
Measure what happened next.

Give Codex an account and a period. It identifies explicit calls and inferred bullish/bearish views, then measures subsequent price performance.

01 Install in Codex

Open Codex and paste this message:

```
$skill-installer Install from  
https://github.com/davidwang95/x-account-backtest  
using path skills/x-account-backtest.  
Prepare its Python requirements.
```

Then send the backtest command in your next message.

02 Choose an account and period

Use a handle or profile URL, followed by the period.

```
$x-account-backtest @DaveWangMIA last 5 years
```

03 Read the results

Get a PDF with hit rates, market comparisons and charts, plus a call ledger linked to the original posts.

U.S. stock/ETF default: 21 trading sessions, compared with SPY.
Crypto is scored separately; macro views are retained without a score.

Historical X posts and market prices need provider access or supplied exports. Provider fees may apply. No separate AI API key is needed.
